# SUN DOWN

**PARADYZ**

Clinker, as a universal material, comes back in a totally new version. Sundown by Maja Ganszyniec collection is a tribute to traditional materials and methods of construction material production. This is also an opportunity to go beyond our interiors and look at buildings and their style comprehensively and highly creatively.

The collection is rooted in tradition – by means of colours, formats and surface types. However, Sundown clinker is modern thanks to its technology which guarantees robustness. This enables to restore clinker to architectural and interior designs.

---

MAJA  
GANSZYNIEC

Maja Ganszyniec is a world-renowned designer of furniture and industrial products, who runs her own STUDIO GANSZYNIEC in Warsaw. Her designs combine innovation and timeless style with ecological solutions. Maja Ganszyniec's works have been shown at exhibitions, e.g. in Milan, Amsterdam, London and Berlin, and published in major industry magazines such as Domus, Icon, Abitare and Wallpaper. In her career, Ganszyniec has collaborated with brands such as IKEA, Comforty, Noti and Leroy Merlin. Neve Creative is Maja's second cooperation with Ceramika Paradyż.

**PARADYŻ**

## MAIN FEATURES OF THE PRODUCT

### **NON SLIP PROPERTIES**

Thanks to their high non-slip properties, the clinker tiles protect from slipping and falling. These parameters make them great for outdoor stairs as well.

### **IMPROVED DURABILITY**

Clinker is a hard material with high wear resistance which is not easy to scratch or damage. This is highly important, in Particular, for terrace tiles where the risk of scratching or damage is much higher than in any other areas.

### **EASY TO KEEP CLEAN**

High usable parameters make clinker tiles easy to keep clean which is why they retain their visual appeal even many years later. Cleaning does not require any time-consuming activities and cleaning agents are sold by any store offering household chemicals.

### **RESISTANT TO ADVERSE WEATHER**

Clinker products are resistant to adverse weather. They have low absorption (0.5–3%) which places them among frost resistant tiles. Their appearance is not affected by moisture, sunshine or high temperature fluctuations.

SUNDOWN

SAND

SUNDOWN  
SAND

Sand, inspired by light clay colour, refers to historical buildings dating back to 1930s and 1940s. In certain regions, it was a highly popular colour of yellow façade bricks. This smart yellow hue looks great in interiors as well thanks to its space-lighting properties.

MARRONE

SUNDOWN

# MARRONE

Marrone is a unique, characteristic sour cherry colour known from Modernistic tenement houses. Thanks to its popular use on façades, this dark, deep sour cherry colour entered the Modernism palette, thus becoming ageless. Its extraordinary hue added elegance to entrance and to representative areas.

SUNDOWN

# TUNDRA

Tundra refers to dark green so popular today. This modern colour is inspired by green which became used more extensively for ceramic wall cladding in 1960s. The products those days had deep structures and different textures, making intense, strong visual decorations. Green with a deep structure and shine is a tribute to the mosaics of the past.
